QUEEN INSURANCE COMPANY OF LIVERPOOL.

THE Undersigned have been appointed Agents in Shanghai for the above Company and are prepared to grant Policies against Fire, as follows—

On private Dwelling Houses of the best description, detached and in the occupation of Foreigners, at the rate of ¾ *per cent per annum.*

On Furniture and Stores in the above, 1 *per cent per annum.*

On first-class detached Godowns, ¾ *per cent per annum.*

On second-class Godowns 1 *per cent per annum.*

On Merchandize in Godowns, 1 *per cent per annum; ½ per cent for 3 months, and ¾ per cent for 6 months.*

Policies will be granted to the extent of £10,000 on any one Building or on its contents.

No Insurance will be considered in force until the premium be paid.

Considerable advantages are offered by this Company to those effecting Insurance for a longer period than one year.

Forms of Proposals and all requisite information can be obtained at the Offices of the Undersigned.

BLAIN, TATE & Co.
tf Shanghai, 1st July, 1861.

ALLIANCE FIRE ASSURANCE COMPANY OF LONDON.

THE undersigned Agents in Shanghae for the above Company are prepared to accept assurance as under:

On private Dwelling Houses of the best description, *used strictly as such*, and the contents consisting of Household furniture, &c., therein, in private use, at the rate of ¾ *per cent per annum.*

On Buildings of Brick or Stone covered with Tiles, Slates or Metal, detached from Chinese Tenements, and on their contents at the rate of *one per cent per annum*, and to the extent of £10,000 on each separate building.

A Building and its contents taken together form one risk. Thus the above sum may be underwritten on a Building alone, or on the contents alone, or part on the Building and part on the contents.

Assurances for Six months will be charged *three-fourths, and for* Three months *one-half of the annual rate.*

No Assurance is to be considered in force until the premium be paid.

Amongst other advantages of the Company, the Assured will be entitled to participate in the Profits after *five* successive payments.

Parties applying for Assurances will please send in full particulars of the Risk to be taken; any deviation from which, without the consent of the Company, will vitiate the Policy.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, MAY 10, 1862.

CHINA at the present time is undergoing the throes of a transition state in her domestic and foreign affairs, which, in all probability, may be the turning point in her destiny for future generations. On all sides it is apparent that "a change has come over the spirit of her dream," and she is being aroused from her Oriental lethargy by the vigour of Occidental action. From the fitful slumber of ages she was suddenly awakened to a sense of danger from without, as well as from within her territory. No sooner has she pacified her external enemies, than a portion of her own children are tearing at her vitals, and destroying the fairest portion of her patrimony. In vain do the industrious and frugal inhabitants produce the necessaries and luxuries of life from a grateful soil—in vain do they wish to live in peace and enjoy the fruits of their labour. No sooner have they, by the sweat of the brow, raised their food and built their dwellings in comfort, than their rapacious brethren—the non-workers and dregs of society—rush down upon them, despoil them of their substance, dealing murder and rapine amongst their families; while their natural protectors are utterly powerless in defending the aggrieved or punishing the aggressors.

Without extending our views on the general question, to the entire boundaries of this *Europe of the East*, let us confine our observations to the present aspect of affairs in this and the adjacent provinces, where our interests are more concentrated than in any other province in China. What a spectacle to the world is this human pestilence, which with rapid strides is devastating the most fertile portion of the fairest lands on earth. Here Nature has been most lavish of her gifts, and man with ease can secure inexhaustible resources, not merely for his own immediate use, but for his less fortunate fellowmen in the most distant regions of the South and West. While the people of other countries have to till the stubborn soil for a bare subsistence at the best of times, the normal condition of these densely peopled provinces, is to have enough and to spare at all seasons. In their palmy days, the cities where this wealth was garnered were the busy seats of commerce and manufactures, and some were famous for the learning and refinement of their institutions. What is the condition of these wealthy cities and fertile plains now? The former are deserted by their inhabitants and falling into ruin and decay under the ruthless hands of their invaders, while the latter are fast becoming plains of desolation.

With such elements of material prosperity, and such an industrious population, what a magnificent country might not this become, under a rule that would be equally powerful to protect the peaceful as it would be to chastise the unruly. That the constituted authorities are unable to do either the one or the other is abundantly manifest, from the insignificant portion of this province which may be considered under their control; and which would soon succumb, but for the protection of foreign arms. Under these circumstances was it to be supposed that our naval and military authorities were to remain passive, while the Taiping rebels were speedily reducing these provinces to a state of anarchy and subjection; and thereby crushing all the interests which induced us to risk our lives and means on this revolutionary territory. To remain neutral any longer in face of the hostile demonstrations of the insurgents at our very doors, would have been a culpable neglect of duty. There was only one course to pursue, and that was an armed intervention. In breaking the bonds of neutrality the British Naval Commander-in-chief has shewn that he has a heart to feel for the sufferings of the wretched inhabitants and an arm to punish their oppressors.

Having inaugurated this policy, and, from the events of the last three months, successfully carried out its measures, it is evident that our warlike operations against the Taiping rebels cannot be confined to the capture of a few towns and small cities in the environs of Shanghai. There is abundance of work in hand for our naval and military forces for the next six months, if an effective blow is to be struck at the root of this movement, so as to leave us in peace to carry on our trade in these provinces. Ningpo must be wrested from their hands; they ought to be driven out of Soochow, and Nanking should be levelled about the ears of that arch-imposter Hung-sin-tsuen and his myrmidons. That matters are tending towards that consummation is pretty clear. The commanders of the allied forces are united in their opinions, and the officers and men are "eager for the fray," so that ere long we shall see the strongholds of the rebels one by one fall into our hands. The difficulty will be to hold them, as the Imperial levies are not to be trusted. In that case it would be advisable that a joint commission of English and French should be appointed to have certain control over the men who garrison them.

Further, it is also clear that we are not going to fight the battles of the Imperialists for nothing. At the outset let it be fully understood that we expect material advantages in China, commensurate with the victories obtained by us over the rebels. The Ministers-plenipotentiary of the Treaty Powers must not be too modest in shewing the Government the invincibility of our arms—the courage and discipline of our soldiers and sailors should not be "hid under a bushel." In all probability when the news of our important successes reach Peking, the Emperor may distribute a number of mandarin buttons among our naval and military commanders. As far as the British force is concerned, we think we are right in stating, that there is no desire amongst the officers of either service to receive *draughts from the unsullied (?) fountain of Celestial honour.* Their predilections are not in favour of blue, red, or white buttons, and even a peacock's feather has no charm in their eyes. "England expects every man to do his duty;" and when it is done, he looks alone to that pure fountain where his own beloved Queen dispenses honours for the reward of his services. But through these services and the expenditure of blood and treasure, our common country is entitled to substantial equivalents. If we succeed in recapturing the lost cities in the hands of the Taiping rebels, the Imperialists must be called on to make further concessions for our mutual benefit in securing these places from future invasion. In order to do so effectually they must delegate that power to us which they are not capable themselves of maintaining, and allow us to organize a properly disciplined army, officered by Europeans of respectable antecedents, in whom we can have confidence. We must also have power over the "sinews of war." At present we have control over the collection of the Customs revenues. That supervision must be extended to the expenditure of these monies, with a view to the extinction of mandarin corruption. We must teach Prince Kung and his colleagues further practical lessons in finance, so as to husband the monetary resources of this rich empire for its peaceful conservation, and the suppression of rebellion. It is in this respect that China has been chiefly impoverished, and it is here that her future destiny will be mainly controlled by the foreign influences now in operation.

THE BONIN ISLES.

By the *Red Gauntlet* from Kanagawa we learn that the Japanese Government had taken possession of the "Bonin Isles," and hoisted the Japanese flag in place of the British ensign which has been flying there for the past thirty years. A Japanese government steamer was lying in the chief port and had surveyed the islands; where a portion of the lands have been reserved for their use, and the inhabitants forbidden to kill any cattle, sheep, or deer. Two other Japanese vessels were expected at the Bonin Isles, and the *Red Gauntlet* passed a Japanese Junk on the 18th March steering for them.

TRANSLATION OF THE IMPERIAL EDICT PROHIBITING THE USE OF OPIUM.

(From the Peking Gazette.)

WANG-CHING-YUN has prayed us that We should enforce restrictions on officers of all ranks, soldiers and scholars—using opium.

Formerly during the ninth year of the reign of Hien-fung, H.R.H. Prince Hui and others addressed His late Majesty to the effect that, in a schedule proposed for relaxing the prohibition on opium, it should be ruled—with a view to securing some limit to its use—that as heretofore no permission should be given to officers, literati, and soldiers indulging in the article. In the present instance Wang-ching-yün painfully opens out the growth of the vice of opium-smoking among the above classes, and makes an earnest appeal for some effective injunction being enforced to secure the limit of its use among them.

What he has laid before Us is certainly a point of vast importance. As to the drug itself, though the prohibitions on it have been relaxed, yet the prevalence and the growth of its irregular use to so very large an extent, must have no little hearing and influence upon the customs and tone of society.

Our civil and military officers respectively, have their posts to fill; but if night be turned into day and every duty be performed with irregularity [a consequence necessarily arising from using this narcotic], what probability is there that the affairs of state can be conducted as they should be with vigour and promptness?

Our literati have to put forth every effort in colleges or classes, gradually rising till they appear on the roll of men competent to occupy official posts. But if the educational elements are allowed to grow recklessly and wildly, where is the hope of converting such into good material?

Our soldiers, to be men of pluck in the army, ought to be thoroughly expert in military warfare; but if their energy flags and becomes feeble, and their skill in arms falls to disuse [one further result of this vicious indulgence], will it be possible for them to keep their places in battle array and overpower a strong enemy?

Now, just as we are instructing Our officers to be vigilant in their respective duties and reforming our soldiery, why should they be allowed to tyrannize over themselves or to abandon themselves to ruin, for want of further and distinct prohibitions as to the indulgence complained of?

Accordingly, We prescribe that, hereafter (without in the least interfering with the commonalty availing themselves of the altered code on this score,) those three orders—our Officers, Scholars, and Troops—shall continue under the same prohibition heretofore existing as to opium-smoking; and We require that the heads of the Civil, Military, and Educational departments do keep strict watch upon this head. Any offenders must immediately be punished with severity and reported for degradation, and in hope that, by strenuous efforts, We may revive the declining morals of the day, no indulgence shall be granted to connivance in any shape.

Next, with regard to Our Imperial Palace—in itself a place majestic and dignified—how much greater is the necessity that eunuchs, servants, and messengers in and around Our residence should be prevented smuggling opium into its sacred precincts. Therefore, We hereby command the great minister in charge of Our domestic concerns to convey Our mandate to the chief over our eunuchs and other servants of the Inner Palace, putting them under the strictest prohibition, so that if any of them are found trespassing the regulation, he shall be summarily punished; and thus We shall maintain Our dignity and majesty.

THE REBELS IN THE NINGPO DISTRICT.

To the Editor of the NORTH-CHINA HERALD.

SIR,—At a time when the rebel question occupies so much the minds of the community, I presume it may not be out of place to relate an adventure which happened to me some weeks ago when travelling inland from Ningpo. It was no illegal or warlike trade which caused me to venture into the country held by the Taiping rebels, but the peaceful intention of buying silk and tea, which was reported to me could be had in large quantities in the neighbourhood of Show-shing.

As no person is allowed in the interior without he is provided with a rebel pass, so my first care on arriving at Ningpo was to obtain one from a Taiping chief. A gentleman conversant with Chinese kindly proffered to accompany me into the walled city. The actual state of the once fine old city of Ningpo is now anything but pleasing. The principal street running from the Salt Gate to the East, as well as that intersecting it from the North Gate to the South, which, a short time ago were adorned with elegant shops, fitted up and artistically painted, are now devoid of ornaments, and deserted by their former occupants.

The houses in other parts of the city, however, appeared in better condition, and in many places it is scarcely possible to see any marks of Vandalism. Here and there, also, new buildings were going on, and I was consequently better disposed towards the Taipings at Ningpo after having crossed through the greater part of the city.

My first visit was to the Commissary-general—a little intelligent man of the name of Fong-tha-sing, who appeared exceedingly delighted on seeing our party, especially on hearing my friend talking the Peking dialect so fluently. We had a long discussion with this chief about the administration of the province; and as far as I understand, it seems that the Taipings begin to think seriously of governing the districts they fall into their hands. Being asked to grant us a pass, he not only agreed to do so, but he sent his own flag, and offered the services of one of his officers as a guide and protector. I, however, refused this last offer, and was content with the flag and pass.

We then proceeded to the principal city office, and were admitted to the presence of Wang-sha-sing—a warlike-looking man, but with an unintelligent expression of face. This grandee, amongst amongst the rebels was lounging on a cozy chair, delighting himself with the harmony of a musical box, which was playing while he was dispatching orders. Having been asked my opinion about governing the district of Ningpo, he replied at once, that he would do his best to protect traders, either Europeans or Chinese, and he hoped before long to regain the confidence of the population, and see business again restored to its former channel. He asked me if I was not afraid to go into the interior; and was much pleased when he was told that in former days I had been a fighting man. He handed me some muskets, asking my opinion of them, and we then separated very good friends.

In a few days afterwards, having made arrangements with a merchant of Ningpo, we agreed to travel with me, we started one morning with two boats, having two European servants with us, and something like ten Chinese. Our boats under the influence of wind and with good rowers sailed up the Ningpo river, and in 24 hours we arrived at a placed called Yong-ko, where a very fine stone bridge spans the river.

As we were enthusiastically admiring the architecture of the bridge, we observed a number of people on it, showing no friendly intentions towards us, and as we neared the arches were unceremoniously saluted with a shower of stones. Our Chinese servants and the two Europeans were in the first boat, and several of them were hit by the stones. I stood up and tried to point out the rascals on the bridge by making signs to them, upon which they threw more stones, and one fired a jingall at us. Seeing that they intended a chief, I fired a shot in the air, thinking it would frighten them, but it had no such effect.

By this time the tide was forcing us under the bridge, and we observed that the crowd became greater, while they were handing heavy stones to each other, evidently for the purpose of dropping them on us at a favorable moment. Under these circumstances I thought it advisable to give the rascals, which I did with my fowling piece charged with No. 4 shot. Some of them were wounded apparently, and the others threw a shower of stones into the boat which injured my friend and self very much, and smashed all the crockery and little comforts we had in the boat.

The conduct of these Yong-ko rebels was very different from those at Ningpo, that we thought of stopping and remonstrating with the chief. We were speedily forestalled in this by warning from the shore that we could not proceed, so we landed at once. Scarcely had we done so when a mob of rascals attempted to pillage the boats, and we had to struggle among about 30 or 40 fellows from whom we had a difficulty in escaping back to where we would get on board again. We then pursued our journey, followed by several shots from our persecutors, who at last disappeared to our intense satisfaction

For about five miles we proceeded without incident, but just as we thought ourselves safe and free from molestation, we discovered that we were completely surrounded by men who immediately began to fire upon us. At this our boatmen refused to go on, or the Chinese interpreter to come on deck, so that we were obliged to let the boatmen pull to the river bank. Then our interpreter we enquired what was the cause of all this trouble, when they replied that we had killed one of their men, and they, consequently wanted one of us. We argued that it was impossible such small shot could kill a man; but if it was the case we were willing to give some remuneration to his family. They said that they did not want anything but one of our heads, and as I had fired the shot, they demanded mine. More than two hours were expended in debating this point—we refusing to go back by land to Yong-ko and they trying to compel us to do so. At last seeing that we were resolute in not leaving our boats, they took us in tow, and back we went to the stone bridge. About half way we were met by over 200 armed men coming to reinforce the 100 who had already surrounded us, upon which the whole mob set up an infernal noise which was not at all pleasant

It was about 2 h. P.M. when we returned to the fatal bridge, and then we saw about 100 armed men waiting our arrival, with anything but friendly intentions. I said to my companion "What shall we do? if they attack us, I don't see the use of any resistance"? To which he answered "It is impossible to escape and to fight would be insane, against such a band of marauders." He was right, and so we both jumped a shore, putting our trust in God.

I had scarcely touched the ground when a heavy chain was thrown round my neck, and quickly twisted so as to impede my respiration. The same was done to my friend in distress. No one then struck me on the head with what appeared to be a wooden sword, and some fifteen or twenty bamboos made acquaintance with my body, while one fellow on horseback gave me a cut on the head with a knife, which produced a very large wound. My unfortunate companion was treated much in the same manner; and even a harmless boy was wounded in the head by a sword. All this occurred in a few minutes, and the excitement among the Chinese was so great that we despaired of seeing the next day.

It appeared, however, not to be their policy to kill us, so after a little more torture they dragged us to the house of one of the chiefs. Here they attempted to force us on our knees before the dirty rebel chief, but we indignantly refused to do so, when one of them struck me on the head, and drawing his sword said I deserved to have my head cut off at once. However, seeing that we were determined not to kneel, some other more cruel heads interfered and we were allowed to remain in a sitting position on the floor. Our two European servants were less self-possessed and more abusive, so they went down on their knees, and, strange to say, four sharp edged stones were brought and they were forced to kneel upon them for some time.

At last one very dirty chief appeared, and said that he wanted my head cut off. I then showed him our papers and the rebel pass; so after hearing who we were, he ordered that we should be taken care of as well as all our property until Tha-shing had decided as to our fate. After this we were taken before another chief no less dirty and disagreeable; who being delighted at last occasion to sit in judgment on some "foreign devils," began to rebuke us for attempting to fight the Taipings, and that we should certainly lose our heads for the offence. We stopped his speech by demanding to be sent to Ningpo to be judged there. After much consideration he concluded that we should go to prison, while a messenger was to be sent down to Ningpo for orders.

Reproduced with permission of the copyright owner. Further reproduction prohibited without permission.

Accordingly we were marched off to prison, our feet and hands as well as our necks hung with heavy chains, which they showed an inclination to fasten to the bars, but did not do so. The place in which we found ourselves, was a portion of a room, one half of which was appropriated as a pig-sty, another portion set apart for the *intérior* of the jailers, and the remainder was our apartment. Of all the horrible holes I ever saw this beat them. The stench was overpowering, so that we could scarcely breathe. I am certain that eight or ten days abode there would have killed me. Indeed it was the most wretched place man can imagine. We were only separated from the pigs trough by a barricade of wooden bars, through which our food was passed, and where the foul air had free passage. What I suffered then I hope will never be endured by my bitterest enemy. Four long nights and three days we were kept in that pestiferous prison, without obtaining any news. At last on the morning of the fourth day, to our great delight, we saw a man belonging to the establishment of my friend, who came up from Ningpo with three rebel chiefs carrying an order for our immediate release, and to return all our property which had fallen into their hands.

The news of our misadventure had reached the brother of my fellow friend in distress; and my kind friend the interpreter lost no time in seeing the two head chiefs at Ningpo, through whose energy they decided on fetching us back immediately. When we reached Ningpo we called upon the chief rebel and explained to him the cause of the quarrel, and his good sense did not require any long arguments to convince him of our being in the right. Adequate apology was made for the misunderstanding; and a special pass was offered in case we intended to go to Show-shing again.—I am, yours &c.,

G. E.

NEW METHOD OF TREATING SMALL-POX.

During the residence of H. M. troops at Tientsin we learn that small-pox was very prevalent amongst the men, and that ordinary vaccination was little or no protection against the ravages of this disfigurer of the "human face divine." Besides the usual remedies, a new mode of treatment was adopted by Dr. Rennie, surgeon of the 31st Regiment, which is held by that gentleman, and several others who have followed his system, to have the effect of withdrawing the severity of the disease from the face to other parts of the body by the application of an irritating ointment. There are other benefits alleged to be gained by this mode of treatment over the old style of practice, but this alone—if it be the case that the disfiguration of the countenance is greatly, if not entirely averted—is deserving of the greatest commendation and should be generally adopted. But we all know that "doctors differ;" and although this innovation in orthodox therapeutics has found favour in the eyes of one portion of our military practitioners, there are some who dispute its efficacy. In order that our readers may form their own views on the subject we publish the following extracts from Dr. Bindon, the principal medical officer's report to General Staveley on Dr. Rennie's new mode of treatment.:—

In his opinion, in diseases of a suppurative tendency, of which small-pox is the extreme example, there is a latent material in the blood which, at any time, by influences dependent on malaria, atmospheric changes, electrical states or currents in the air, or other exciting causes, may be brought into play, producing, according to the predisposition, diathesis of infirmity, so to speak, of the individual affected; diseases of certain organs or tissues, manifesting itself externally or internally according to the peculiarity of the individual, and the influences under which he is placed. Thus he maintains that the poisoned state of the blood, which, when it produces an external eruption on the skin is recognized by medical men as small-pox, may and often does leave the skin altogether and display its morbid action in some internal organ, producing, as the case may be, internal suppuration or collections of purulent matter in any part, or it may even attack the mucous lining of the intestines, producing there, ulceration and suppurative diseases under the names of dysentery or possibly typhoid fever.

He further holds that while, according to the generally received opinions of the profession, free diaphoresis is the only recognised mode of crisis in intermittent fever; frequently this sweating stage takes place by transmission to the intestinal tract and other parts, and the paroxysm of the fever of the skin terminates without any action by a watery flux from the bowels or elsewhere. Hence he believes that the true nature of the case is entirely overlooked from the connection between the initiatory symptoms, and the local determination not being duly understood.

That the succession of the paroxysms of intermittent fever, particularly in tropical climates, is not always in accordance with the rules set down in books, he adduces in proof of what he has met in his practice with cases, where, though the paroxysms were well marked and following each other in proper order in some attacks, in others occurring in the same individuals, though the cold and hot stages were present, copious intestinal evacuations ended the attack and the fever passed away.

Assuming that this theory—with reference to the close connection existing between local diseases and modes by which intermittent fever may terminate—is correct, an unbiassed mind might not unreasonably extend a similar latitude to diseases of a suppurative tendency, and the class of fevers known as *exanthemata*, of which small-pox, measles, scarlatina and perhaps typhoid fever may be adduced as the most prominent examples.

Holding this general view of febrile disease Dr. D. T. Rennie infers that nature should always be allowed to choose her own mode of crisis, but contends that much mischief and danger will be avoided, by guiding her to the most innocuous site for the elimination of its morbid material.

With this view in mind he proposes the employment of tartar emetic ointment or croton oil by friction to the skin, and by these simple means he asserts with daily increasing confidence that he can determine the morbid action to the surface. In using friction by either of these medicines, he denies that their action is local or due wholly to the irritating properties possessed by them, being altogether opposed to the modern ideas of counter-irritation as employed by the profession at large. He believes that they exert a specific action, and that the eruptions produced by them are external manifestations of the constitutional taint or blood-poison under which the individual is labouring at the time, and that this *materies morbi* being thus in the most safe and easy manner withdrawn from the system, the disease is localized and its power destroyed; internal, so called complications (so much to be dreaded) prevented, and secondary fever aborted.

From his observations in the employment of these remedies, Dr. Rennie further considers that their specific action is due to the development of a condition akin to electricity, which, as it were, appears to decompose the blood-poison and precipitate it inert on the surface.

Having thus briefly given a *précis* of Dr. Rennie's views and principles of practice, I shall now give my own opinion on the subject.

1st.—I believe that many of the diseases classed by medical men, under the heads diarrhœa, dysentery, &c., are due to a vitiated state of the blood produced by telluric emanations or atmospheric conditions, and that the fever with which they set in, owing to the determination of the blood-poison to the internal organ, loses much of its distinct character and is very frequently altogether lost sight of in the treatment, though the periodicity very often observed in the coming on of the attacks of purging would, to a close observer, tend to direct attention to their malarious origin.

2nd.—If a man, who has been previously subject to intermittent fever, though such attack may have taken place in a different country, comes under the influence of malaria or other exciting morbific conditions and is attacked with disease, it is most likely at the outset to put on an aguish character; but his system becoming thus lowered by the attack, he is more liable to, and is most likely to have the epidemic prevailing at the time, engrafted as it were on the primary disense; but how far the periodicity is marked during the progress of the disease I have not been able to perfectly satisfy myself of. In support of the above view, while small-pox was epidemic here, the greater number of the men were brought into hospital with the symptoms of ague so marked, that but for the appearance of the varioloid eruption, in the second or third day the disease would have been considered as simple intermittent fever.

3rd.—From my experience in the treatment of disease in the Cape, India, and China, I fully believe that the medical nomenclature as set forth in the classifications of statistical nosologies is unnecessarily profuse, and by its prolixity I might add extremely puzzling, particularly to the young practitioner. This superabundance of names arises in my mind from the non-recognition of the different modes of crisis which fevers may assume; for it will be allowed that in all cases where acute febrile action is lit up in the system, the self-same train of initiary symptoms are observed: viz., coldness, more or less rigor, lassitude, flying pains about the extremities and back, &c., succeeded by general heat of the skin, headache, thirst, annexia, &c., and as the next stage terminates, so ascending to the present views is the disease designated. Thus, if the terminal stage be by sweating from the surface of the body, it is named *ague;* if by watery dejections from the bowels, it is called diarrhœa, and again if the mucous membrane of the air passages is attacked, another flux is established and it is stated to be *bronchitis;* or yet again if the parenchyma of the lungs is affected, it is *pneumonia*, and if the patient holds out, another flux takes the place of the sweating stage of the ague.

Thus it appears to me that names of diseases are causelessly multiplied, when in reality the critical modes of elimination of the febrile poison alone differ; and I think that this view of the case is materiälly supported by the fact of the recurrence of those symptoms supposed to augur favorably for the termination of febrile diseases generally and their so-called complications, and are named "critical discharges"—those in reality being nature transferring the crisis to a free and consequently an innocuous surface.

[Here, numerous cases are cited and an elaborate table drawn up to shew the efficacy of the treatment, which we regret that we have no room for in our columns.]

Extract from the Report upon the health of the Troops in the North of China for the four weekly periods ending 21st February, 1862.

As will be seen from these figures, *variola* has been very considerably on the increase during the past four weeks, and I regret to observe that the character of the disease has not been of that modified form which it is represented usually to assume when attacking individuals previously protected by vaccination; indeed, many were the most virulent confluent cases it has ever been my lot to witness. All the subjects of this disease bore good marks of vaccination.

Remarking on *variola* in my last report, I very cursorily have adverted to the treatment of this disease by the friction of either tartar emetic ointment, alone or combined with croton oil, pursued by Dr. Rennie, Surgn. 31st Regt., and followed also by Dr. Lamprey, 67th Regt. and other medical officers at this station. Since then I have watched with considerable interest and attention the progress of several cases treated in this manner, and I feel bound to state that in every instance taken early at the onset of the disease, on the appearance of a full crop of pustles, developed by the application of the ointment, the fever, which in many individuals was previously very high, suddenly abated, each patient reporting himself much relieved from the remission in the symptoms; in many also, though on or shortly after admission, there were detected symptoms of chest complications in the shape of pulmonary congestion, these symptoms coeval with the eruptions produced by the ointment, almost immediately subsided; in fact, the disease appeared as if suddenly arrested, and in no instance did it shew a tendency to become confluent.

It is also most remarkable that while in ordinary cases of *variola* allowed to run their course under the usual treatment, the face is the portion of the body to which, as it were, the true eruption of *variola* most tends, producing there, when confluent, such loathsome looking masses of disease; under this mode of treatment, by the friction of the ointment, particulary if begun early, the eruption appears to be diverted from its ordinary site of elimination and to develop itself almost altogether on the trunk and upper extremities.

Dr. Rennie's theory may be briefly summed up as follows:—He premises that the effect of tartar emetic or croton oil, when used by friction to any part of the body is not purely of a mechanical irritating nature, but that the special effects of counter-irritation by these remedies depend on the state of the constitution or the condition of the blood of the individual at the time; and that the crop of eruptions produced by either of these remedies is the actual external indication of the constitutional or blood poison causing the internal disease, and he further holds that the early development of a cutaneous eruption by either of these medicines is calculated to arrest the progress of suparhtive disease generally in the blood and give it as ready and innocuous mode of elimination, thereby also preventing the occurrence of secondary fever, and the liability to any internal complication. Dr. Rennie, from facts which have come under his observation, considers that the specific action of those remedies is due to the development of a condition akin to electricity which, as it were, appears to decompose the blood poison and precipitate it on the surface.

H. V. Bindon, M.D., Staff. Surg.,
Principal Medical Officer.

Tientsin, *March*, 1862.

THE WEATHER.

April, 1862.—This month was ushered in with clear sun-shiny days, and mild nights free from frost. These were succeeded by a few days of rain, and then sunshine alternately, until its close; illustrating its old figurative description of the "smiles and tears of April." On the morning of the 22nd, it rained very heavily, with thunder and lightning. The warmth and the moisture brought forth the foliage of the trees and shrubs luxuriantly; and several of the evanescent flowering plants, in this section of the "Flowery Land," budded, bloomed, and faded during its short thirty days. Other plants of a tropical character sent forth their shoots, indicating the approach of summer. Of these, the shoots of the ever-useful bamboo were served up at table as a palatable vegetable.

The minimum range of the thermometer at night was from 40° to 65°, and the maximum by day 53° to 74°, giving a mean for the former of 50° and for the latter 62°. There were 10 rainy days, being one less than the average of seven years.

We append a valuable table of meteorological observations for the month, furnished by the Master of H. M. S. *Imperieuse*:—

Table *shewing the prevailing Wind in each 24 hours and average height of the Barometer for the month of April 1862, at Shanghai.*

* Lightning at night.

Note.—The Thermometer given is that attached to the Barometer, shewing only the temperature of the quicksilver, and not of the exposed atmosphere. The letters to denote the weather are those in common use. The force of wind is given according to Admiralty Scale, which is commonly used at sea.

(From the Daily Shipping & Commercial News of May 8, 1862.)

CONTRABAND IMPORTERS AT NINGPO.

To the Editor of the
Daily Shipping & Commercial News.

Sir,—In last Saturday's *Herald* you reported the result of the allied Naval and Military Forces of England and France against the Rebels at Kah-ding.

To-day another Expedition leaves Shanghai, the destination of which is doubtless not unknown to you.

The British Government has recently announced in Parliament the intention to defend this Port and Settlement against the Taipings—a course of action in which that most able and energetic admiral, Sir James Hope, has already anticipated the instructions which have at last, no doubt, been sent out to him. While our troops are marching to attack the common enemy, and while our gun-boats are clearing for action, can it be true that within a few miles of us, at the neighbouring Port of Ningpo, there are persons who disgrace the mercantile profession, and who, preferring the gain of a few dollars to the speedy termination of this civil strife which is alike injurious to Foreign and to Chinese interests, attempt the importation of munitions of war with which to enable those piratical hordes to wound our admirals and to slay our gallant sailors and soldiers.

Thanks however to the zealous captain of H. M. S. *Encounter*, Roderick Dew, the attempt appears lately to have entailed a considerable loss upon the enterprising importers of contraband articles.

Last week some 60 cases of Rifles and muskets were seized by Capt. Dew and sent here, where they have been presented to General Ward's Division of the Chinese army; and, by last advices, it is reported that the British ship *Paragon*, endeavored to land 300 guns, varying from 6 to 32-pounders; 100 cases arms, and 50 tons of ammunition. The whole of which have been likewise seized.

There are but few Foreign Houses at Ningpo, to most of which it would be an act of justice to expose the names of the parties concerned in this nefarious traffic.

Can you not call upon the authorities to name them, so that they may meet with the opprobrium which they so well merit?

I am, Sir,
Your obedient servant.

F.

Shanghai, *May 7th*, 1862.

[On making inquiries regarding the truth of the above-mentioned extensive and disgraceful case of contraband traffic, we learn that the statements of our correspondent are perfectly correct; and that the *Paragon* will be brought up to Shanghai to await the decision of the authorities at Peking, as to the confiscation of her warlike cargo—when the names of the smugglers will be made public. We understand, also, that the Captain has been fined 500 Taels for declaring to a false manifest.—Ed. *North-China Herald.*]

ADVERTISEMENTS.

CHARTERED BANK OF INDIA AUSTRALIA AND CHINA.
Shanghai Branch.

NOTICE is hereby given that the Undersigned has this day assumed *ad interim* charge of the above-named Branch of the Bank.

By order of the Court of Directors.
CHARLES IGGULDEN,
Inspector.

17ma Shanghai, 22nd April, 1862.

MISCELLANEOUS.

SHANGHAI TEN PER CENT DRAINAGE LOAN OF 1862 AND SINKING FUND.

AT a Meeting of the Municipal Council held the 7th instant, it was resolved *that the sum of Shanghai Taels One Hundred and Thirty-two Thousand (Tls. 132,000) be raised on Loan at Ten per cent per annum for the purpose of carrying out the System of Drainage recommended by the Committee of Improvement* for their Report submitted to the Land Renters at the General Meeting held at H.B.M.'s Consulate on the 31st ultimo.

The LOAN will be secured by the Municipal Revenues of Shanghai and remain a fixed charge thereon until paid off.

The LOAN will extend over a space of Ten Years and be repaid by a SINKING FUND of 10 per cent.

DEBENTURE CERTIFICATES will be issued for Shanghai Taels 100 each.

A Tenth Part of this will be paid off yearly on the 1st July.

The number will be determined by lot, and be duly notified by advertisement in the public papers one month prior to that date.

The money will be required in three equal instalments, the first of which will fall due on the first July.

The 2nd and 3rd calls will be made on dates, of which notice will subsequently appear.

Applications for Stock received at the Municipal Council Room till 15th May next, when the usual allotment will be made.

HENRY TURNER,
Chairman.

MUNICIPAL COUNCIL ROOM,
Shanghai, 9th April, 1862. 10my

NOTICE.

THE ACCLIMATISATION SOCIETY OF VICTORIA, AUSTRALIA, are willing to make PURCHASES of such useful or ornamental, BIRDS, ANIMALS, and FISH, landed in Melbourne, as may meet the requirements of the Society.

W. H. ARCHER, *Hon. Sec.*

THE ARGUS GOLD PRIZE CUP.

THE ARGUS GOLD PRIZE CUP, of the value of One Hundred Pounds, for the year 1861, will be given to any one (unconnected with *The Argus* or *Yeoman* newspaper) who, within the year ending 31st October, 1862, shall INTRODUCE into the colony the most valuable or interesting ANIMAL, BIRD, or FISH, in sufficient numbers to establish the breed.

The decision to rest with the Council of the Acclimatisation Society, subject to the ratification of the Editor of *The Argus.*

Applications to be lodged with the Council of the Acclimatisation Society, before the 1st of December, 1862.

29fe

BELLAMBI STEAM COAL COMPANY, NEW SOUTH WALES.

THIS superior Steam Coal now supplied to H. M. Steam-ships on the Australian Station and also to the Railways in Victoria and New South Wales can be obtained on application to LAIDLEY, IRELAND & Co., Sole Agents at Sydney, or MESSRS. RUSSELL & Co., of Hongkong and Shanghai, and who will produce certificates and analysis showing the high character of this Coal. No cargoes are shipped without signed Pit Certificates from the Bellambi Mines accompanying them.

Perfect freedom from CLINKER, SULPHUR, or SLATE, combined with the established fact that this Coal produces fully 30 per cent more steam than any other Australian Coal, will commend it in the Eastern Markets.

tf Sydney, N.S.W., January 20th, 1862.

EXTENSIVE FRAUDS.

LEA & PERRINS having discovered that several of the Foreign Markets have been supplied with SPURIOUS IMITATIONS of their "WORCESTERSHIRE SAUCE," the labels of which closely resemble those of the genuine Sauce, and in one or more instances with the name of L. & P. FORGED: they have deemed it their duty to caution the public, and to request purchasers to see that the names of LEA & PERRINS are upon the *Wrapper, Label, Stopper, and Bottle.*

L. & P. further give notice that they will proceed against any one who may infringe upon *their rights, either by manufacturing or vending* such imitations, and have instructed their correspondents in the various parts of the world to advise them of such infringements.

*** Wholesale and for exportation by the Proprietors, Lea & Perrins, Worcester, England: Crosse & Blackwell, and other Oilmen and Merchants, London.

29ma London, 19th October, 1861.

ELEY'S AMMUNITION

COMPRISES EVERY DESCRIPTION OF SPORTING AND MILITARY AMMUNITION.

DOUBLE Waterproof Central Fire Percussion Caps, as originally invented by them, are particularly adapted for use in India, where the caps are often allowed to remain a long time on the nipples of rifles and fowling-pieces, the ignition being at all times safe and certain, whilst in humid weather the discharge is as instantaneous as with ordinary caps on the driest day. For testimonials as to their value for shooting in India, *See Col. Jacob's work on "Rifles & Projectiles."*

PATENT WIRE CARTRIDGES

For killing game at long distances; also the Green Cartridges, made with the largest drop shot and mould shot, will be found very effective at large game, where the sportsman has not a rifle in the field.

Also, chemically prepared Cloth and Felt Gun-Waddings, to prevent the leading of guns. Cartridge Cases for breech-loading shot guns, and Ball Cartridges for Prince's and other breech-loading Rifles, Muskets, Pistols, &c.

ELEY BROTHERS,
Sole Contractors to the War Department.

tf April 20, 1862.

CAUTION.

LETCHFORD'S WAX VESTAS.

R. LETCHFORD & Co. guarantee their Matches will light in any Climate, EVEN IF DIPPED IN WATER. Customers therefore, when ordering Wax Matches should be particular in requesting "Letchford's Make," as others are often substituted.

R. Letchford & Co., having just built an extensive Manufactory, are now prepared to execute at a few days' notice, any order made payable in England.*

Three Colts Lane, Bethnal Green, (late of Whitechapel), London.*
